

## SW 5.11.11 Release Notes

### Release Versions:

- UR Software Update: 5.11.11
- URCap Software Platform:
  - URCap API: no change
  - URCap SDK: no change
- URSim Linux: 5.11.11
- URSim Virtual Machine: 5.11.11
- User Manuals: 5.11.11
- Support Log Reader: no change

### Bug Fixes

#### PolyScope GUI

- Fixed issue where multiple loads of a program containing **Home** nodes would eventually make PolyScope run out of memory.
- Fixed issue where the configuration of the **Safe Home** Position would not be displayed after loading some older installations.
- Fixed issue where Support Files would sometimes be missing content, such as the log history file.
- Fixed issue where **Auto Start** was not enabled again when it is disabled by stopping the program.

#### Controller

- Fixed "No Controller" issue when resuming a program that was sent through the primary socket to the controller when a program is stopped with 3PE TP in manual mode.
- Fixed issue in URScript, where the wrong order of named arguments can cause the "ValueStack is Full" error.
- Fixed issue where the installation variables may become corrupt.
